- Storage

METHODOLOGY TO DELIVER EXCELLENCE

Security

Information is the lifeline of today's enterprises. Especially when it can drive transactions, facilitate idea exchanges and create unique competitive advantages for organizations worldwide. But if businesses do not protect, secure and manage their information smoothly and effectively, it can cripple them with disastrous results.

Regulatory and market requirements are further driving the need for security and compliance...

Our focus is to make security simple, cost-effective and practical, yet engrained in your process fabric. We offer a multi-layered approach to security, from risk profile assessment to implementation and operational services, via a security roadmap made for each customer. The approach towards Security Solutions covers a Four Phased cycle: Assess, Design, Implement and Manage.

Stage 1: Assess

- Identifying business critical systems
- Determining vulnerability
- Current state of protection

Stage 2: Design

- Designing complete security architecture
- Designing Security policies
- Defining Security controls S

Stage 3: Implement

- Implementing the information security controls
- Integrating security solution with existing environment

Stage 4: Manage

- Managing the implemented security controls
- Continuously improving the security controls
- Regular checks for latest vulnerabilities Our security management service encompasses all touch points of an enterprise including: Firewalls IDS/IPS End point Security including Anti Virus

Platform & Storage

Data availability is a key concern for customers, where data is a business backbone. We help customers manage their growing volumes of data during its entire lifecycle from creation to archival to deletion. We combine the best-of-breed products along with our services to deliver high-value, low-risk storage management. Our aim is to help enterprises maximize the value of their information assets and protect it from loss or any other threat, without compromising on compliance or service levels.

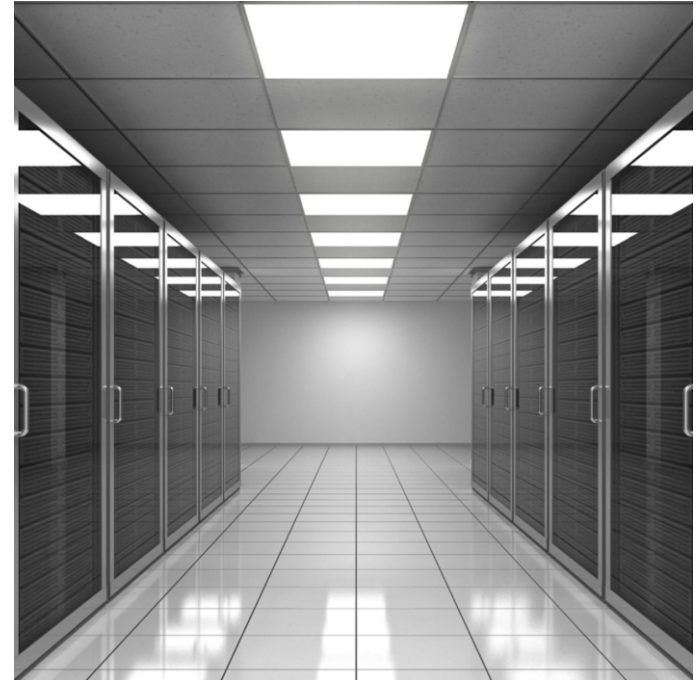

Our holistic solutions approach encompasses the following steps:

1. Assessment / Consulting / Business Continuity Planning.
2. Designing Platform and Storage Architecture
3. Implementation and Integration of the Solution.
4. Manage Server Farm and Storage Infrastructure.

Our expertise in Enterprise Storage & Medium Business Storage solutions is backed by a range of solutions from leading storage technology providers.

Our services include the following:

- 🔗 Server Consolidation and Virtualization
- 🔗 Backup and Restore
- 🔗 Replication and High Availability
- 🔗 Compliance – e-mail and file Archival
- 🔗 SAN and NAS solutions
- 🔗 Storage Virtualization

Building Stronger
Walls Of Technology

ADDING VALUE IN EVERY BIT

Infrastructure Optimization

In our endeavor to help enterprises derive maximum benefit from their existing IT infrastructure investments and resources, we have developed a focused practice on Infrastructure Optimization.

As part of this offering, we provide a combination of consulting and solutions to address the critical IT resources including Network Management, Desktop-Server Management and Helpdesk etc.

Our consulting approach helps in prioritizing current IT Infrastructure issues which is followed by design and implementation of customized solutions focused towards proactive resource management, optimal current utilization and better planning for future investments. Our non-disruptive methodology is aimed at improving end-user productivity as well as IT infrastructure availability... to maximize its contribution to business execution
